Objective:

Aspiring Software Engineer with Knowledge in Artificial Intelligence and Machine Learning seeking in opportunity to enhance technical skills and contribute effectively to the Organization to grow and in IT industry. Eager to learn new technologies, contribute to real-world projects, and grow as a professional while delivering innovative and effective solutions.

Education:

BTECH – computer Science and Engineering (2023-2027)	CGPA- 8.71
Board Of Intermediate Education-Oxford Vit Junior College (2021-2023)	Marks– 914
Board of secondary Education-Chaithanya Bharathi School (2020-2021)	Marks- 591

Technical Skills:

Programing Skills: Python, C, Java

Web development: HTML, CSS, JavaScript, React js, Node js(Basics)

Database: MySQL

Others: Operating Systems, Computer Networks

Certifications:

- Human Computer interaction- NPTEL
- Digital Marketing- Great learning platform
- Generative Ai creation- Coursera
- Certificate from Generative AI
- Internship certification
- Certification from Wagdhwani Foundation

Internship:

AI Cardiac Arrest Prediction System

S – Situation

During my internship at **Purple Technologies**, I worked on an AI-based system to predict the risk of cardiac arrest.

The project aimed to combine **Machine Learning (ML) and IoT** for real-time health monitoring.

T – Task

My task was to collect patient health data through **IoT sensors** and preprocess it for analysis. I also developed an ML model to identify patterns and predict possible cardiac risks.

A – Action

I integrated IoT sensors to monitor parameters such as **heart rate, temperature, and other vital signs**. The collected data was processed and given to the ML model to generate cardiac-risk predictions.

R – Result

The system provided **early risk predictions** based on real-time health data.

This project improved my practical knowledge of **ML, IoT, data preprocessing, model development, and healthcare applications**.

Projects:

Developed an AI-powered platform for generating social media captions and hashtags based on user inputs such as topic, tone, and target audience.

- Implemented NLP and Machine Learning techniques for content generation, hashtag recommendation, and engagement prediction.
- Designed a user-friendly frontend and integrated trained ML models with a Flask backend to generate real-time results.

Technologies used: Python, Machine Learning, NLP, HTML, CSS, JavaScript, Flask

Activities:

Participated in coding Challenges- code chef, let code

Participated in Design thinking& innovation from Hack Boards team.

Active participate in College Cultural Even

Hobbies:

- Cooking
 - Listening to music
 - Playing online Games
-

Strengths:

- Good Teamwork & Collaboration
 - Leadership Skills
 - Adaptability
-

Personal Details:

Date of Birth: 10 FEB 2005

Gender: Female

Nationality: Indian

languages known: English, Telugu

Marrital Status: Unmarried

I hereby declare that the information provided above is true to the best of my knowledge.
